

# Reverse the linked list

2 methods

- Reverse the data
- Reverse the Link

# Reverse the data

# Reverse the Link

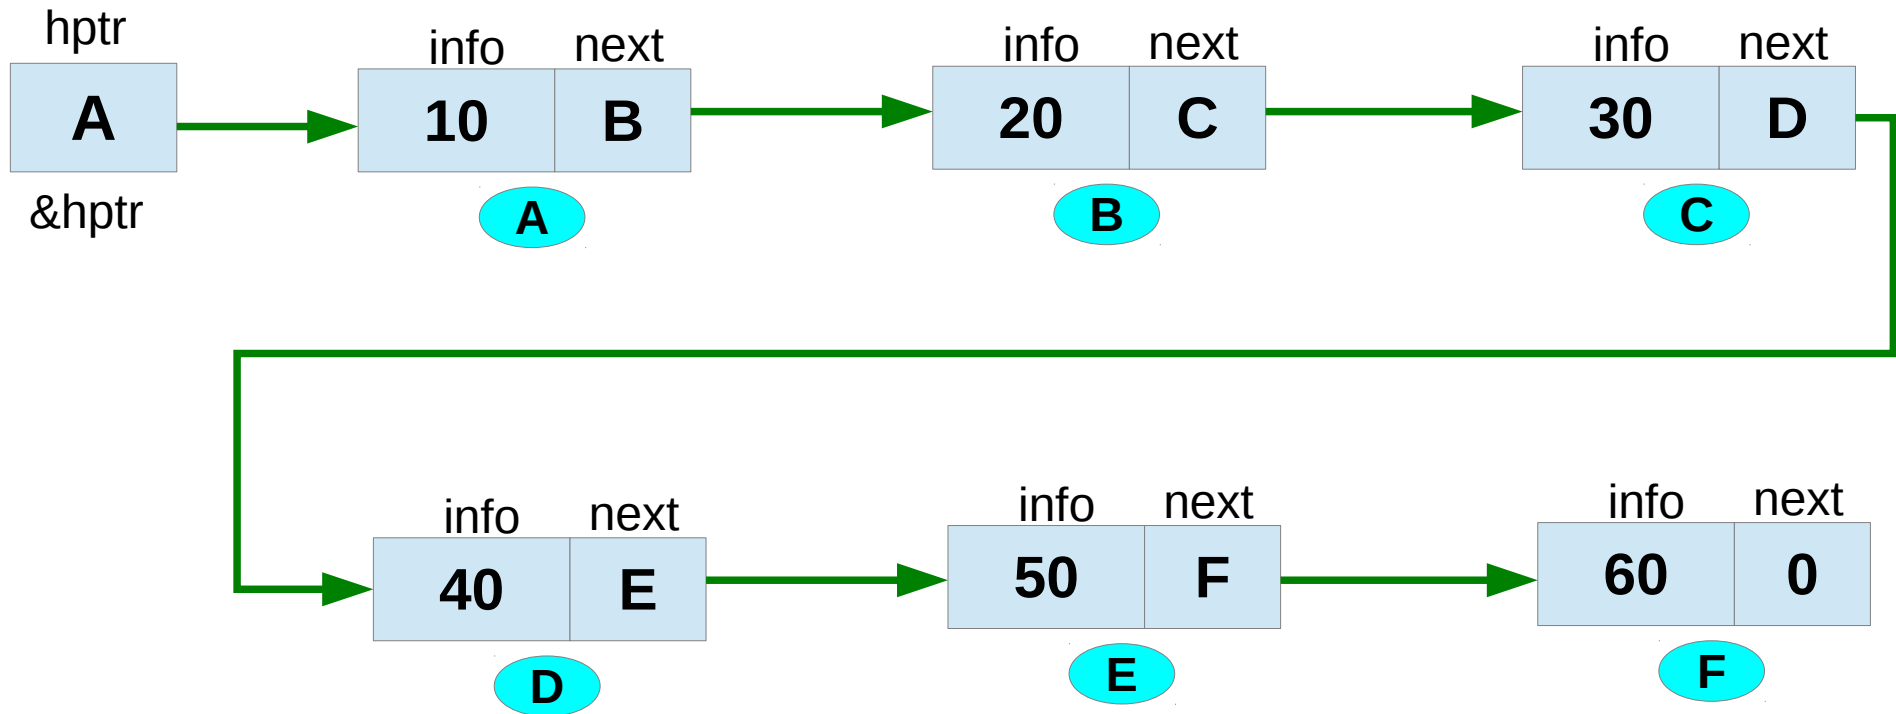

# rev\_data

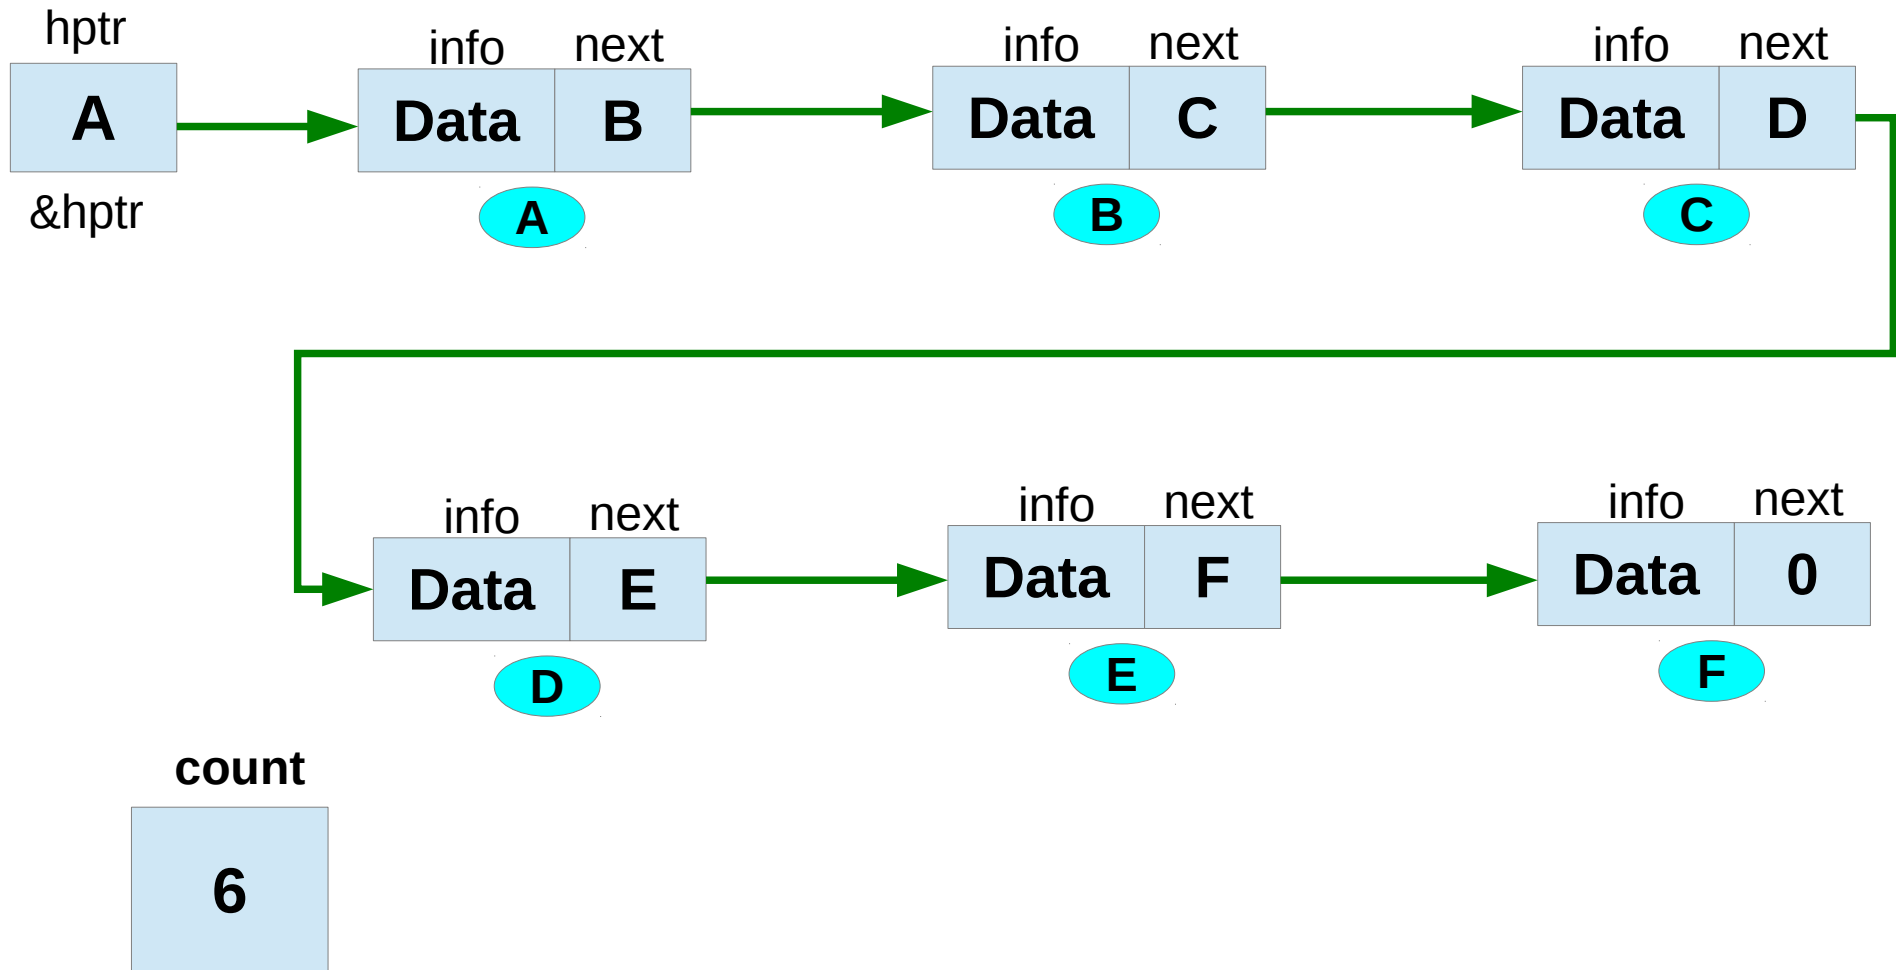

## Method 1 :

1. Take 2 pointers like P1 & P2.
2. Make P1 points to first node, P2 points to last Node and swap the data.
3. Now increment P1 to point to second node & decrement P2 to point to second last node and swap the data.
4. Same way increment P1 to next node, decrement P2 to the previous node and keep on swap the data untill half of no.of nodes count
